

iOS trial project

Written by: Felipe Peña

Date: November 9th 2015

Description:

Use the follow JSON response

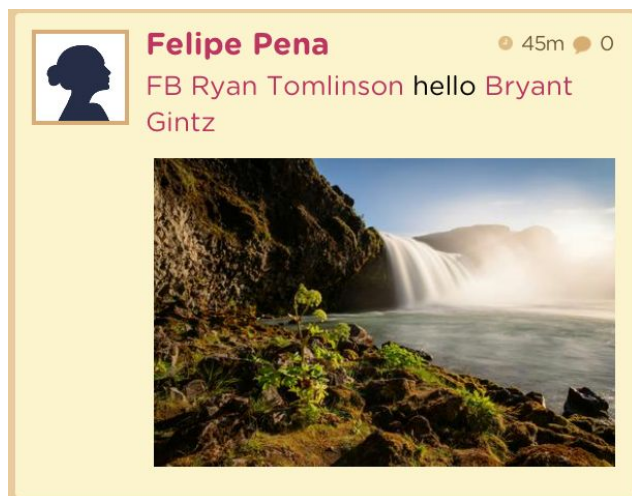

(<https://dl.dropboxusercontent.com/s/svuljrx45pekiwe/posts.json?dl=0>) and create a list of questions using a UITableView and UITableViewCell objects.

The array of questions is under the “posts” key.

Please consider the follow elements for each question cell:

1. An avatar: Under “poster - picture” key.
2. Poster name: Under “poster - first_name” and “poster - last_name” keys.
3. Question message/text: Under “message” key.
4. Picture/image (if any): Under “pictures” key.
5. Date when question was posted: Under “created_dt” key.
6. Comment count: Under “reply count” key.

Question cell image reference:

Extra points:

1. Dynamic height and adjustment for poster name.
2. Dynamic height and adjustment for question message/text.
3. Dynamic height and adjustment for picture (if any).

4. Relative time for date when question was posted.
5. Clean and polished UI.
